SemiDice Anti-Counterfeit Policy Statement

Combating the proliferation of counterfeit electronic parts in the electronic industry is a historical ideology at SemiDice. As a leading supplier of bare die and wafer products, we purchase and process only authentic components for our customers.

To prohibit the introduction of counterfeit parts into the military and aerospace supply chains, we limit our source of wafer and die to only the Original Component Manufacturer (OCM) and their authorized distributors.

Although by nature, microelectronic die are much more difficult to counterfeit as compared to package devices, we require an unbroken chain of documentation traceable back to the OCM.
